On the other hand, the results of the present study suggest that the use of a single, non-validated questionnaire may not be sufficient to capture the full range of factors influencing the decision-making process. The use of multiple questionnaires, including validated ones, may provide a more comprehensive understanding of the factors influencing the decision-making process.

On the other hand, the fact that the  $\beta$ -phase is not observed in the  $\beta$ -phase region of the phase diagram (Fig. 1) may be due to the fact that the  $\beta$ -phase is not stable at the composition of the sample. The  $\beta$ -phase is stable at the composition of the sample only at temperatures above 100°C. The  $\beta$ -phase is not observed in the  $\beta$ -phase region of the phase diagram (Fig. 1) because the  $\beta$ -phase is not stable at the composition of the sample at the temperature of the experiment.
